

User enters an upcoming event and the date that it occurs and clicks submit.

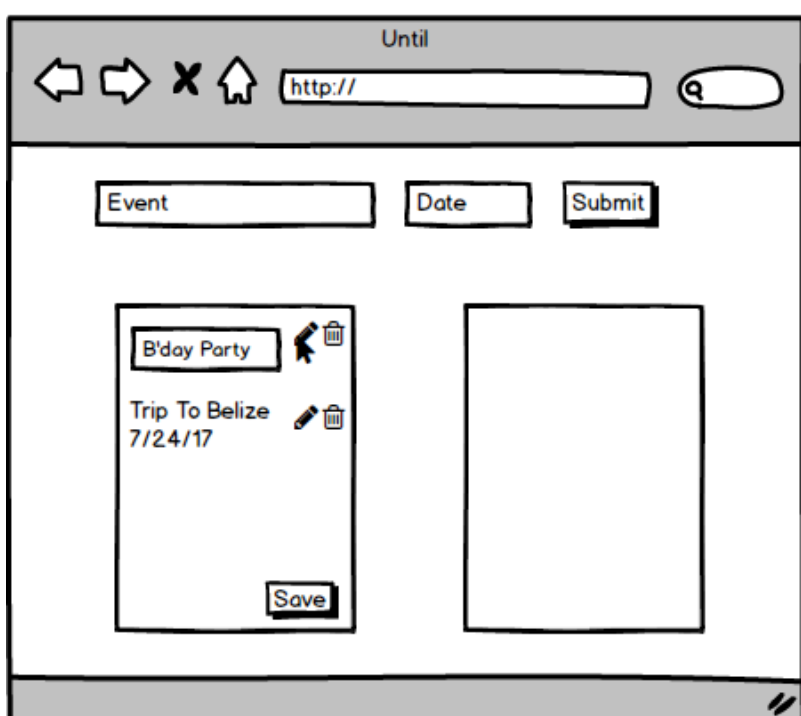

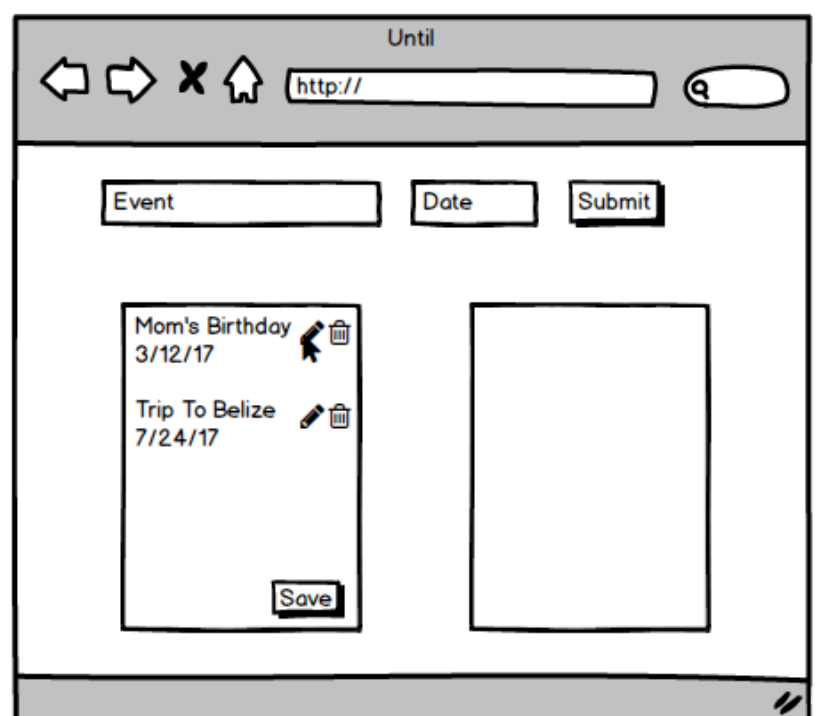

Once submitted user entered upcoming event gets added to the event list in the left text area below the input field.

User clicks on an upcoming event and the text area to the right pulls up a detailed countdown of time until the event date.

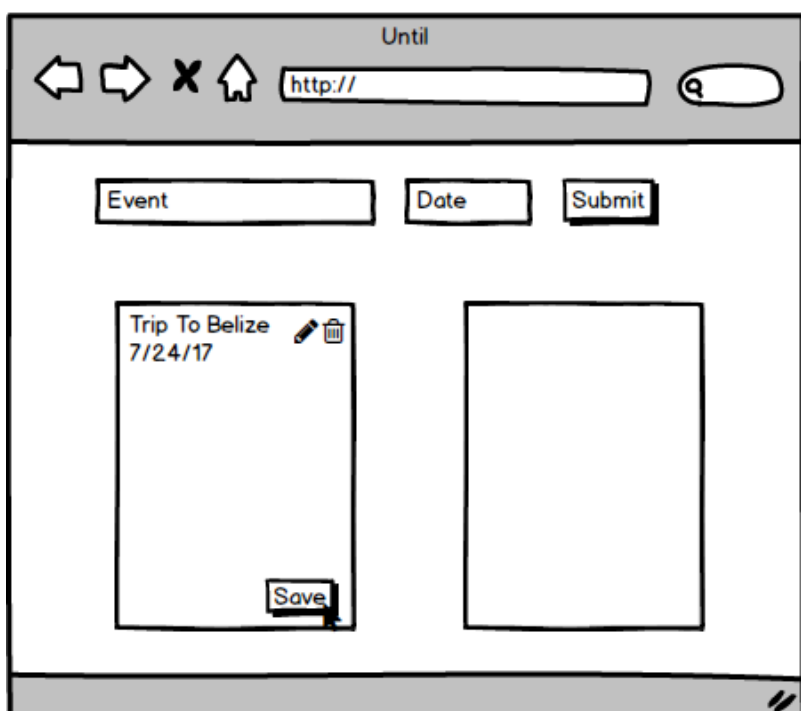

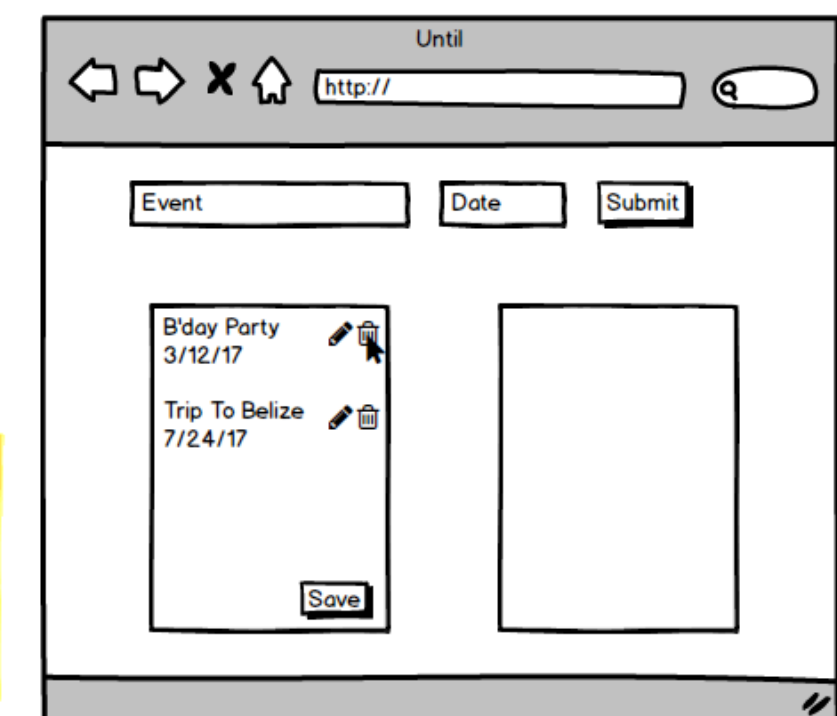

User edits upcoming event by clicking on edit button.

User selects event to edit, by selecting the edit icon directly to the right of the upcoming event listed in the text area. Once edit button is clicked, button displays and has the function of a save button.

Once edit tool is selected, static upcoming event text becomes malleable and edits can be made.

User clicks on trash can to completely delete an event from the upcoming event list.

once all edits or deletions have been made user clicks on save button to save all changes before returning to creating or adding events to the list.

Once save button is clicked, upcoming event text area returns to original state, returning the save button to an edit button and hiding the edit and trash icons
